SPARK GUARD.

PLATE No. 1072.

REPRESENTS IRON FRAME.

Finished in Black, Japan or Bronze. Suited for No. 1070 Fender.

PLATE No. 1070.

REPRESENTS IRON FENDER.

Finished in Nickel. Bronze or Black Japanned. Can be fitted to any Grate Frame.

PLATE No. 1032.

CIRCULAR FRONT LOG.

Adapted for Grates with circular fire front, narrowing back.

PLATE No. 1033.

THREE-STICKS LOG.

PLATE No. 1034.

Nos. 1 and 2 GAS LOG.

PLATE No. 1035.

Nos. 3 and 4 GAS LOG.

The above are cuts of our GAS LOGS of "Regular" design, adapted for general use. The Cut on the right shows Nos. 3 and 4, formed of back log and five sticks; and that on the left shows Nos. 1 and 2 formed of back log and four sticks.

The accompanying cuts represent the new GAS LOG OR IMITATION WOOD FIRE, which has become very popular wherever introduced, on account of its beauty and utility.

The sticks of the Log are formed and colored to resemble hickory wood, and have fixed between them at different places splits of asbestos, which become incandescent when in use; so that when gas is turned on, a match applied, and the hundreds of small gas jets ignited and combined, the Log gives a close imitation of a hickory wood fire. The advantages of the Log are that a good cheerful fire is ever ready by simply turning on and lighting the gas, the flow of which is regulated with the same ease and appliance of the ordinary gas burner. It makes no dust, dirt or ashes. It also ventilates the room very effectually.

For parlors, reception, sitting or dressing rooms, where fire is used occasionally, there is nothing equal to it; and in every house heated by a furnace it will be of great use on the chilly days of spring and autumn, when a cheerful blaze, easily regulated, would add very much to the comfort of the room, while a furnace, or even a coal fire in a grate, might be found inconvenient or uncomfortable.

The cost of burning, with gas at the rate of $3 per thousand feet, and turned on at full head, is 15 cents per hour according to size of Log; and this, if the time taken in making up a coal fire is valued at anything, and the cost in wear of carpets and furniture caused by the dust and ashes is calculated, would be found perhaps less than the cost of coal. With private gas machines a Log can be run for from five to ten cents per hour. The Log becomes heated through soon after the fire has been started, when the flow of gas may be considerably reduced and still a good heat will be thrown out. A brass union is furnished with every Log, fixed in the back, by which connection is readily made, with wrought, lead or rubber tube, to the nearest gas pipe.

They are generally used in open fire places, placed on andirons, now again quite extensively used, either of the old style in brass, or of new and more handsome design and finish in steel, bronze or gilt, all of which we keep a supply.

They can also be used in the low-down or half low-down grates; and the illusion is perhaps more complete in them than on andirons, as the absence of ashes is not noticed, and these flat-bottomed grates are now much used for wood.
